

PROJECT SCOPE MANAGEMENT

Information Technology Project Management, Fifth Edition

Learning Objectives

- Understand the elements that make good project scope management important
- Explain the scope planning process and describe the contents of a scope management plan
- Describe the process for developing a project scope statement using the project charter and preliminary scope statement
- Discuss the scope definition process and work involved in constructing a work breakdown structure using the analogy, top-down, bottom-up, and mind-mapping approaches

Learning Objectives (continued)

- Explain the importance of scope verification and how it relates to scope definition and control
- Understand the importance of scope control and approaches for preventing scope-related problems on information technology projects
- Describe how software can assist in project scope management

What is Project Scope Management?

- **Scope** refers to *all* the work involved in creating the products of the project and the processes used to create them
- A **deliverable** is a product produced as part of a project, such as hardware or software, planning documents, or meeting minutes
- Project scope management includes the processes involved in defining and controlling what is or is not included in a project

Project Scope Management Processes

- **Scope planning:** deciding how the scope will be defined, verified, and controlled
- **Scope definition:** reviewing the project charter and preliminary scope statement and adding more information as requirements are developed and change requests are approved
- **Creating the WBS:** subdividing the major project deliverables into smaller, more manageable components
- **Scope verification:** formalizing acceptance of the project scope
- **Scope control:** controlling changes to project scope

Figure 5-1: Project Scope Management Summary

Planning

Process: **Scope planning**

Output: Project scope management plan

Process: **Scope definition**

Output: Project scope statement, requested changes to the project, updates to the project scope management plan

Process: **Create WBS**

Output: WBS, WBS dictionary, scope baseline, requested changes to the project, updates to the project scope statement and project scope management plan

Monitoring and Controlling

Process: **Scope verification**

Outputs: Accepted deliverables, requested changes, recommended corrective actions

Process: **Scope control**

Outputs: Requested changes, recommended corrective actions, updates to the project scope statement, WBS and WBS dictionary, scope baseline, project management plan, and organizational process assets

Project Start

Project Finish

Scope Planning and the Scope Management Plan

- The **scope management plan** is a document that includes descriptions of how the team will prepare the project scope statement, create the WBS, verify completion of the project deliverables, and control requests for changes to the project scope
- Key inputs include the project charter, preliminary scope statement, and project management plan

What Went Right?

- Many financial service companies use customer relationship management (CRM) systems to improve their understanding of and responsiveness to customers
- A senior management team at the Canadian money management company Dynamic Mutual Funds (DMF) launched an enterprise-wide, national program to build and manage its customer relationships
- They needed a faster and more organized, highly participative approach, so they proposed a new seven-step concept called project scope design
- DMF won an eCustomer World Golden Award for world-class innovation

Table 5-1:

Project Name: Information Technology (IT) Upgrade Project

Introduction

The purpose of this document is to provide suggestions and guidance for preparing several important scope management documents related to this project.

Preparing the Scope Statement

The preliminary scope statement will provide the basis for preparing more detailed scope statements. The scope statement needs to be reviewed with key stakeholders, especially the project sponsor, potential suppliers, and users of the project deliverables. Follow corporate templates when available, and be sure to have expert input in defining the scope. Since the scope statement becomes more detailed and therefore longer as the project progresses, limit the length and complexity of the scope statement by placing details in attachments, such as product descriptions, specifications, corporate standards, etc. Each version of the scope statement must be clearly labeled and dated to ensure that everyone uses the most recent version. Changes and additions will be highlighted and communicated to the appropriate personnel. The scope statement will be available on the password-protected project Web site.

Creating the Work Breakdown Structure (WBS)

The project team will work together to create the WBS. The project sponsor and steering committee will review the WBS to ensure that all of the work required to complete the project is included in the WBS. The project team will review WBSs of similar projects, review the company's corporate guidelines for creating WBSs, and focus on determining all of the deliverables required for the project. The project team will determine the tasks required to complete each deliverable, which will be reviewed and agreed to by the project manager, sponsor, and steering committee. These tasks should include product- and process-related tasks. A general guideline to follow for determining the level of detail is that the lowest level of the WBS should normally take no longer than two weeks to complete. The WBS can be revised as needed, and the sponsor and steering committee must approve these revisions.

Verifying Completion of Project Deliverables

The project manager will work with the sponsor and steering committee to develop a process for verifying successful completion of project deliverables. In general, the project sponsor will be responsible for verifying the completion of major deliverables. The contract administrator will also be involved in verifying successful completion of deliverables received from outside sources. Contracts will include clauses describing the scope verification process.

Managing Requests for Changes to Project Scope

All requests for changes to project scope that may have a significant effect on meetings and project requirements must follow the formal change control procedures specified in Attachment 1. A change request form will be completed and reviewed by the designated group. It is crucial to follow these procedures to prevent scope creep.

ment Plan

Table 5-2: Sample Project Charter

Project Title: Information Technology (IT) Upgrade Project

Project Start Date: March 4, 2008 **Projected Finish Date:** December 4, 2008

Project Manager: Kim Nguyen, 691-2784, knnguyen@course.com

Project Objectives: Upgrade hardware and software for all employees (approximately 2,000) within nine months based on new corporate standards. See attached sheet describing the new standards. Upgrades may affect servers, as well as associated network hardware and software. Budgeted \$1,000,000 for hardware and software costs and \$500,000 for labor costs.

Approach:

- n Update the information technology inventory database to determine upgrade needs
- n Develop detailed cost estimate for project and report to CIO
- n Issue a request for quote to obtain hardware and software
- n Use internal staff as much as possible for planning, analysis, and installation

ROLES AND RESPONSIBILITIES:

NAME	ROLE	RESPONSIBILITY
Walter Schmidt	CEO	Project sponsor, monitor project
Mike Zwack	CIO	Monitor project, provide staff
Kim Nguyen	Project Manager	Plan and execute project
Jeff Johnson	Director of Information Technology Operations	Mentor Kim
Nancy Reynolds	VP, Human Resources	Provide staff, issue memo to all employees about project
Steve McCann	Director of Purchasing	Assist in purchasing hardware and software

Sign-off: (Signatures of all the above stakeholders)

<i>Walter Schmidt</i>	<i>Steve McCann</i>
<i>Mike Zwack</i>	<i>Nancy Reynolds</i>
<i>Kim Nguyen</i>	<i>Jeff Johnson</i>

Comments: (Handwritten or typed comments from above stakeholders, if applicable)

" This project must be done within ten months at the absolute latest." Mike Zwack, CIO

" We are assuming that adequate staff will be available and committed to supporting this project. Some work must be done after hours to avoid work disruptions, and overtime will be provided." Jeff Johnson and Kim Nguyen, Information Technology department

Scope Definition and the Project Scope Statement

- The preliminary scope statement, project charter, organizational process assets, and approved change requests provide a basis for creating the project scope statement
- As time progresses, the scope of a project should become more clear and specific

Table 5-3: Further Defining Project Scope

Project Charter:

Upgrades may affect servers...

Preliminary Scope Statement:

Servers: If additional servers are required to support this project, they must be compatible with existing servers. If it is more economical to enhance existing servers, a detailed description of enhancements must be submitted to the CIO for approval. See current server specifications provided in Attachment 6. The CEO must approve a detailed plan describing the servers and their location at least two weeks before installation.

Project Scope Statement, Version 1:

Servers: This project will require purchasing 10 new servers to support Web, network, database, application, and printing functions. Two of each type of server will be purchased and dedicated to this project. Detailed descriptions of the servers are provided in a product brochure in Appendix 8 along with a plan describing where they will be located.

Media Snapshot

Many people enjoy watching television shows like Changing Rooms or Trading Spaces, where participants have two days and \$1,000 to update a room in their neighbor's house. Since the time and cost are set, it's the scope that has the most flexibility. Designers on these shows often have to change initial scope goals due to budget or time constraints.

Although most homeowners are very happy with work done on the show, some are obviously disappointed. Unlike most projects where the project team works closely with the customer, homeowners have little say in what gets done and cannot inspect the work along the way... What happens when the homeowners don't like the work that's been done? The FAQ section of tlc.com says, "Everyone on our show is told upfront that there's a chance they won't like the final design of the room. Each applicant signs a release acknowledging that the show is not responsible for redecorating a room that isn't to the owner's taste."

Too bad you can't get sponsors for most projects to sign a similar release form. It would make project scope management much easier!

Creating the Work Breakdown Structure (WBS)

- A **WBS** is a deliverable-oriented grouping of the work involved in a project that defines the total scope of the project
- WBS is a foundation document that provides the basis for planning and managing project schedules, costs, resources, and changes
- **Decomposition** is subdividing project deliverables into smaller pieces
- A **work package** is a task at the lowest level of the WBS

Figure 5-2: Sample Intranet WBS Organized by Product

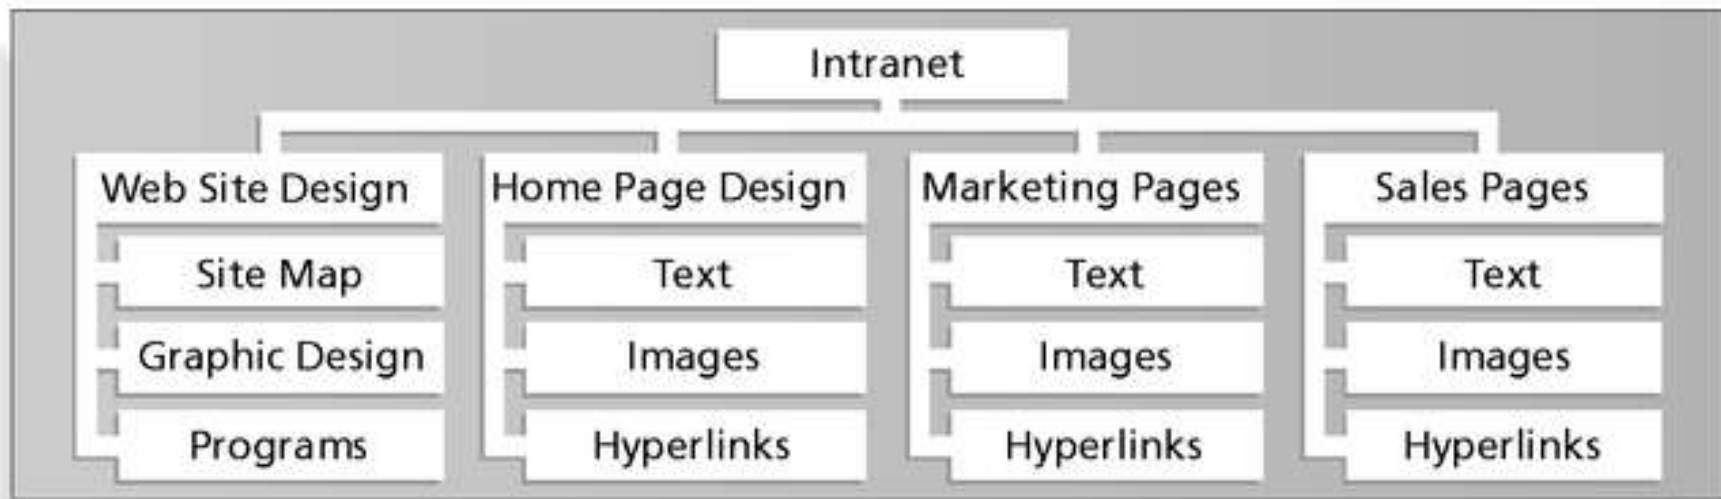

Figure 5-3: Sample Intranet WBS Organized by Phase

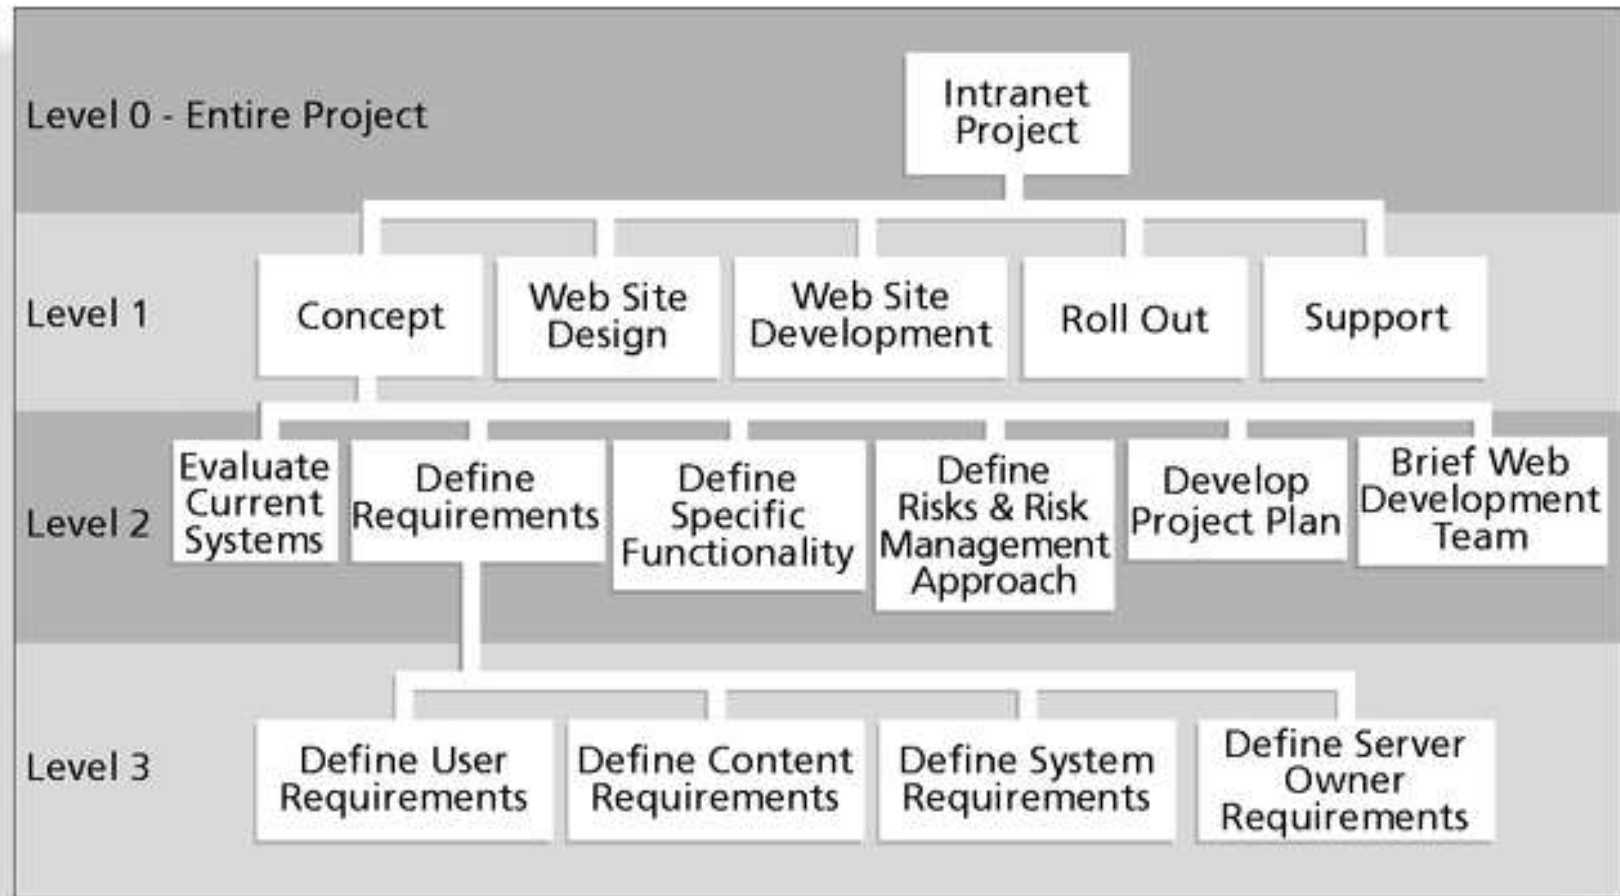

Table 5-4: Intranet WBS in Tabular Form

1.0 Concept

- 1.1 Evaluate current systems

- 1.2 Define Requirements

 - 1.2.1 Define user requirements

 - 1.2.2 Define content requirements

 - 1.2.3 Define system requirements

 - 1.2.4 Define server owner requirements

- 1.3 Define specific functionality

- 1.4 Define risks and risk management approach

- 1.5 Develop project plan

- 1.6 Brief Web development team

2.0 Web Site Design

3.0 Web Site Development

4.0 Roll Out

5.0 Support

Figure 5-4: Intranet WBS and Gantt Chart in Microsoft Project

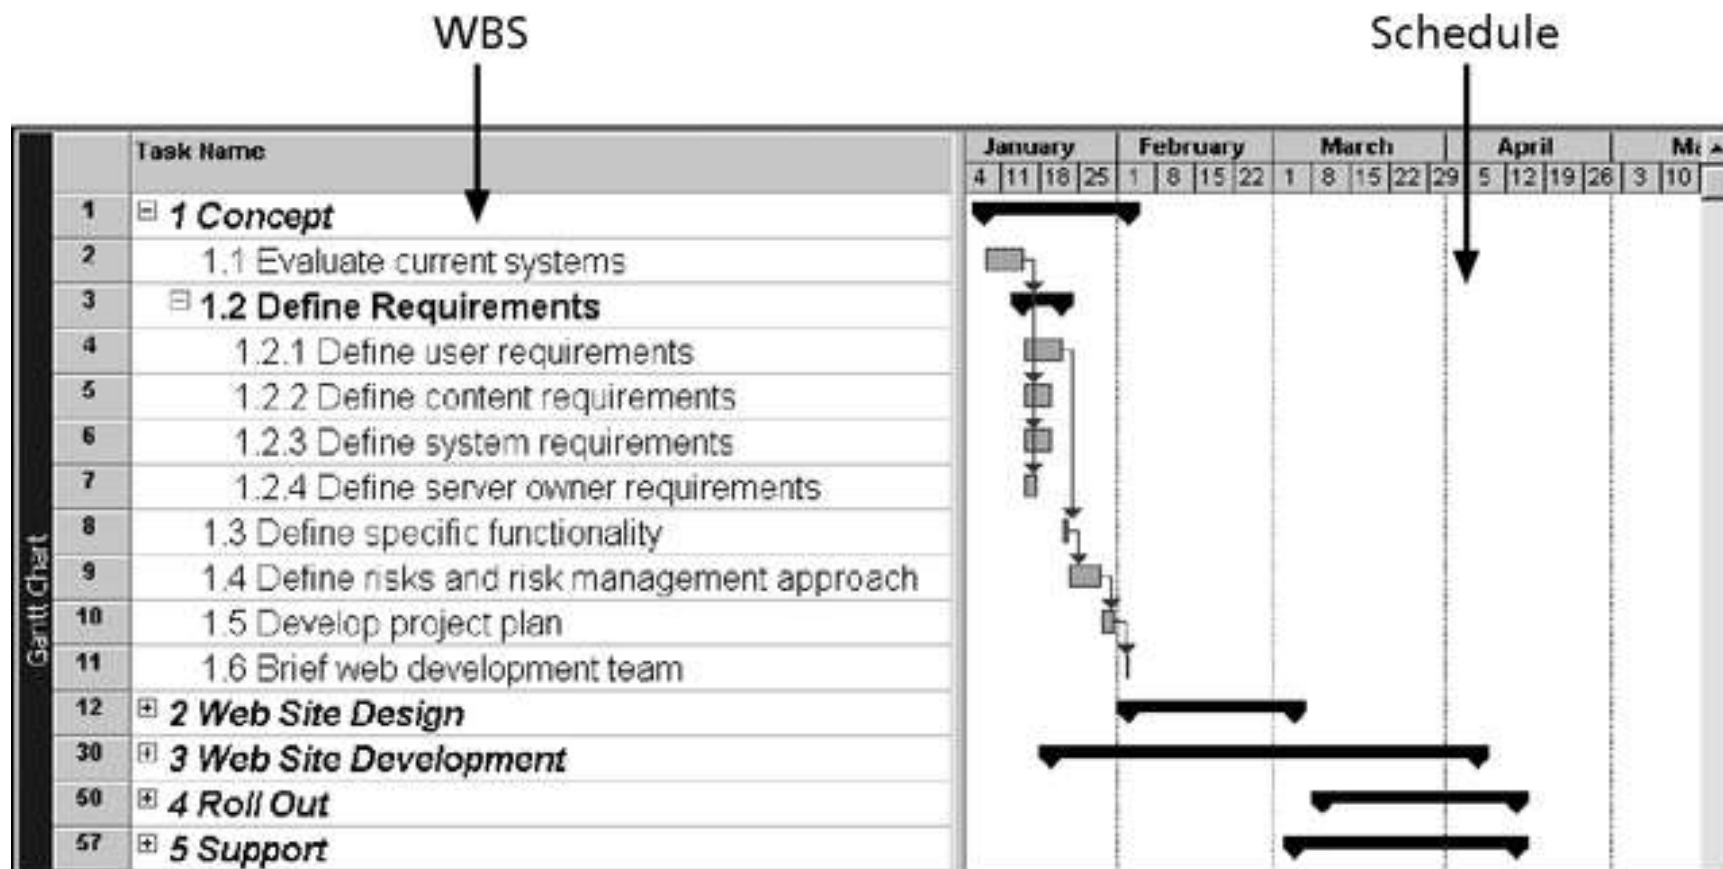

Figure 5-5: Intranet Gantt Chart Organized by Project Management Process Groups

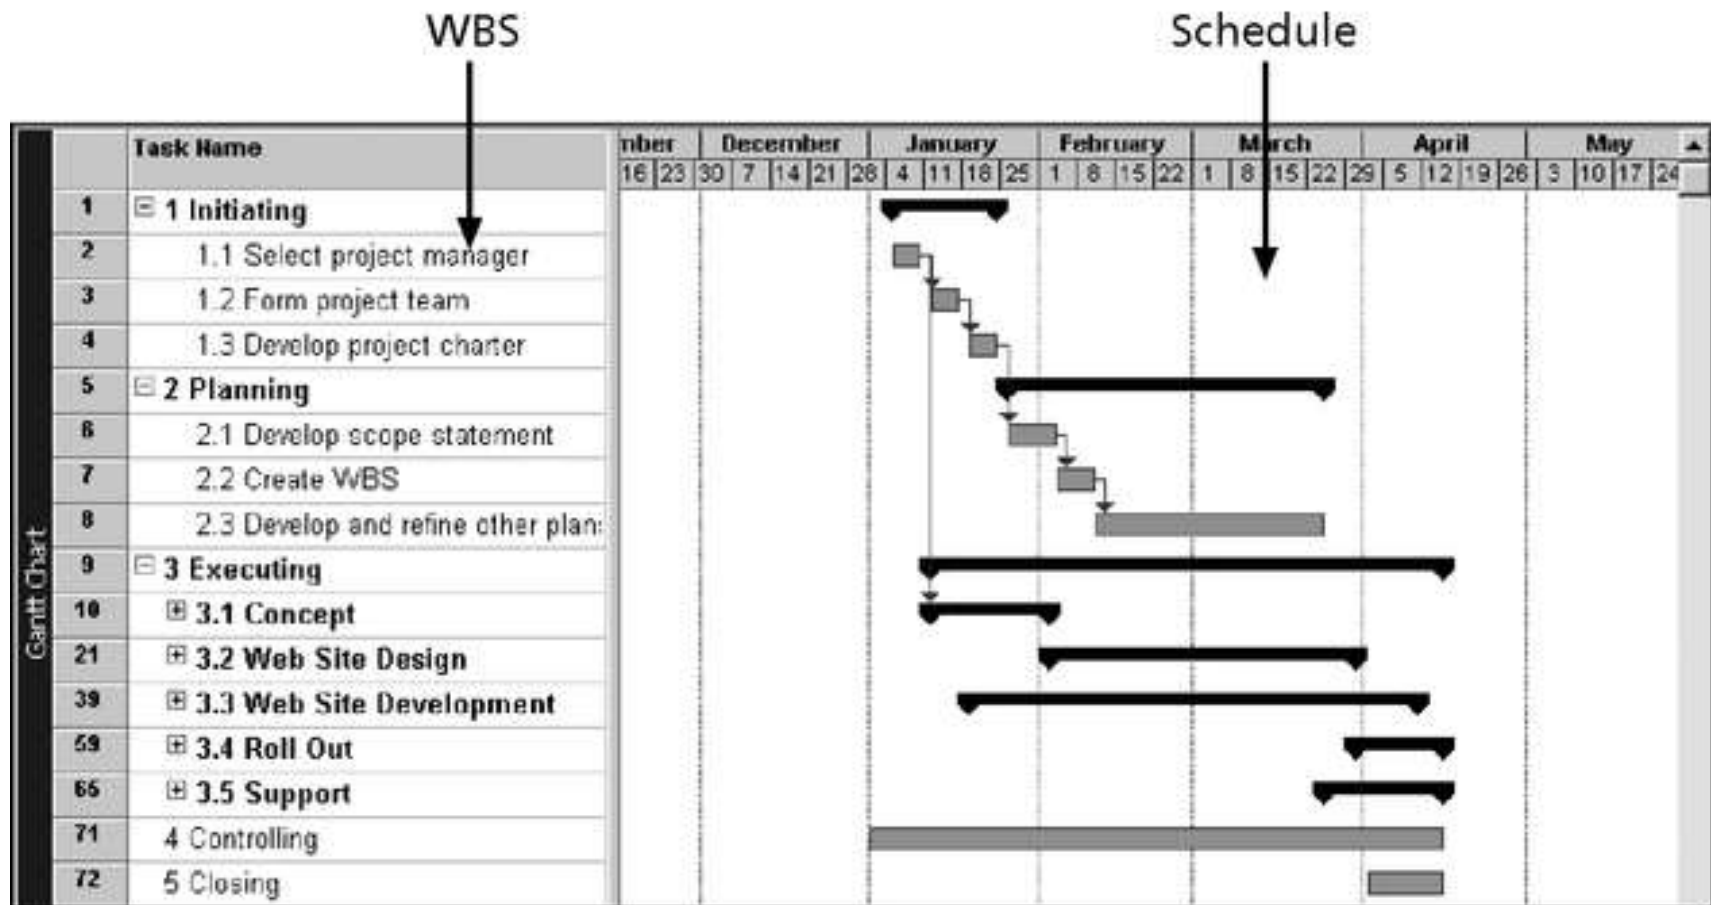

Table 5-5: Executing Tasks for JWD Consulting's WBS

3.0 Executing

3.1 Survey

3.2 User inputs

3.3 Intranet site content

3.3.1 Templates and Tools

3.3.2 Articles

3.3.3 Links

3.3.4 Ask the Expert

3.3.5 User requests feature

3.4 Intranet site design

3.5 Intranet site construction

3.6 Site testing

3.7 Site promotion

3.8 Site roll out

3.9 Project benefits measurement

Approaches to Developing WBSs

- Using guidelines: some organizations, like the DOD, provide guidelines for preparing WBSs
- The **analogy approach**: review WBSs of similar projects and tailor to your project
- The **top-down approach**: start with the largest items of the project and break them down
- The **bottom-up approach**: start with the specific tasks and roll them up
- Mind-mapping approach: **mind mapping** is a technique that uses branches radiating out from a core idea to structure thoughts and ideas

Figure 5-6: Sample Mind-Mapping Approach for Creating a WBS

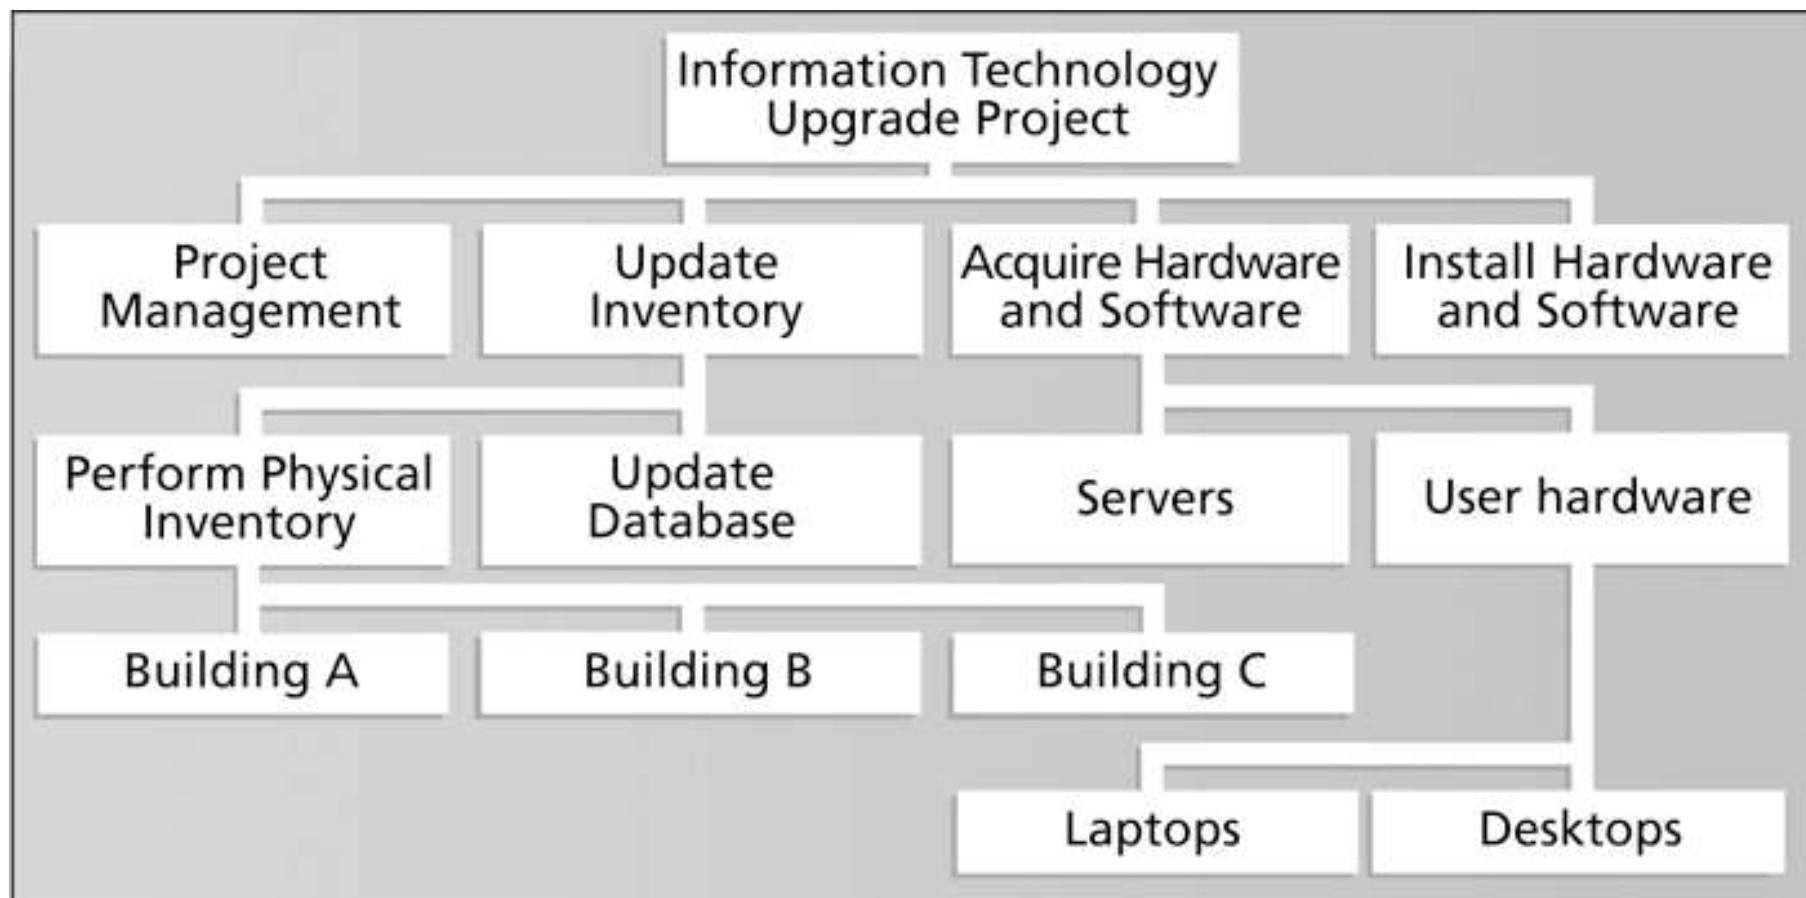

Figure 5-7: Resulting WBS in Chart Form

The WBS Dictionary and Scope Baseline

- Many WBS tasks are vague and must be explained more so people know what to do and can estimate how long it will take and what it will cost to do the work
- A **WBS dictionary** is a document that describes detailed information about each WBS item
- The approved project scope statement and its WBS and WBS dictionary form the **scope baseline**, which is used to measure performance in meeting project scope goals

Advice for Creating a WBS and WBS Dictionary*

- A unit of work should appear at only one place in the WBS
- The work content of a WBS item is the sum of the WBS items below it
- A WBS item is the responsibility of only one individual, even though many people may be working on it
- The WBS must be consistent with the way in which work is actually going to be performed; it should serve the project team first, and other purposes only if practical

*Cleland, David I. *Project Management: Strategic Design and Implementation*, 1994

Advice for Creating a WBS and WBS Dictionary (continued)*

- Project team members should be involved in developing the WBS to ensure consistency and buy-in
- Each WBS item must be documented in a WBS dictionary to ensure accurate understanding of the scope of work included and not included in that item
- The WBS must be a flexible tool to accommodate inevitable changes while properly maintaining control of the work content in the project according to the scope statement

*Cleland, David I. *Project Management: Strategic Design and Implementation*, 1994
